

**INKING PLATE FOR ROTARY PRINTING MACHINE**

Abstract of the Invention:

5       An inking plate for a rotary printing machine  
mounting on a cylinder is provided. The inking plate  
is formed of at least a base plate (11) and a PVC  
composition material of at least one layer (15; 27)  
deposited on said base plate (11) over a majority of  
10 the surface of the base plate (11). The surface of the  
deposited material is designed to be cut so as to  
define relief surfaces (16) having limits corresponding  
to the outlines of surfaces to be inked. The cutting  
of the deposited material occurs when the base plate  
15 (11) is held in a cylindrical form so as to permit  
mounting on the cylinder without substantial  
deformation, from an as-cut state, of the base plate  
(11) or the deposited material.
